ou.ye.canada@gmail.com | 425.410.9532

SKILLS

PROGRAMMING

- Python, TypeScript, JavaScript
- Node.js, React, Redux
- SQL & gRPC & Protobuf
- AWS EC2, S3, Elasticsearch
- Docker, Kafka, ECS

SAFETY & DETECTION

- Adversarial Pattern Detection
- Content Moderation Pipelines
- API Abuse Prevention
- Real-time Enforcement Systems
- Automated Remediation
- On-call & Incident Response

DOMAIN

- Trust & Safety Systems
- ML-driven Threat Detection
- Privacy & Compliance Infra
- Data Residency

DATABASE

- MongoDB, MySQL
- Presto, Hive, AirFlow

INTERESTS

- AI Safety & Alignment Research
- Adversarial ML & Red-teaming
- Open-source Security Tooling

EDUCATION

UNIVERSITY OF TORONTO

B.S. IN COMPUTER SCIENCE
Sept 2012 - June 2018

EXPERIENCE

META | STAFF SOFTWARE ENGINEER - INTEGRITY & PRIVACY TEAM

July 2022 - Current | US, Seattle

- Expanded ML-driven protection coverage across **Meta AI** and **Horizon** — built threat detection infrastructure for SMS verification abuse and mobile rate limiting, surfacing abuse signals to model and platform teams to harden defenses at the training stage.
- Guided a team in architecting advanced threat detection infrastructure to identify and mitigate account abuse and compromise across the Meta family of apps.
- Led end-to-end design of account recovery and authentication flows across Meta's family of apps, coordinating cross-functional enforcement actions and automated interventions.
- Architected privacy infrastructure for data portability, account deletion, and deactivation — data residency controls and compliance-constrained architectures ensuring regional data boundaries — to meet legal compliance requirements.
- Designed and led AI-driven projects leveraging MetaGen (LLM-based chatbot), including prompt engineering for support automation, adversarial input testing to surface edge cases and misuse patterns, and privacy transparency improvements across Reality Labs platforms.
- Mentored engineers through career progression from Intern and SDE I/II to Senior Software Engineer.

DROPBOX | SOFTWARE ENGINEER II - ANTI-ABUSE TEAM

Feb 2021 - June 2022 | US, Seattle

- Built analyst-facing internal tooling — including an administration portal, abuse email processor, and validation service — enabling the trust & safety operations team to review and enforce against flagged content in real time.
- Designed and built a restricted content service handling **50k QPS**, a multi-stage malicious scanning pipeline, and telemetry and alerting infrastructure giving the trust & safety operations team real-time situational awareness over platform traffic.
- Designed and built a compromise detection system for login and sign-up flows, extending coverage in collaboration with the acquisitions team.
- Architected and led development of a cryptocurrency abuse scanner and malware scanning pipeline to prevent storage abuse across Dropbox products.

MICROSOFT | SOFTWARE ENGINEER II - WEB PROTECTION TEAM

Aug 2019 - Jan 2021 | US, Seattle

- Designed and developed the Network Protection feature, deployed across **500M** machines and blocking malicious URIs at **~6M** API calls per day.
- Built a multi-process web crawler and detonation service for URL threat analysis using Puppeteer.
- Led cross-team optimization of the back-end job pipeline for Windows Defender and Microsoft Edge, saving **\$2M** annually for the org and **\$300K** within the team.
- Developed delta compression, reducing bandwidth consumption by **~1TB** daily.

THOMSON REUTERS | SOFTWARE ENGINEER

Jan 2018 - Aug 2019 | Canada, Toronto

IBM | SOFTWARE ENGINEER

May 2015 - April 2016 | Canada, Toronto
